DETAILED ACTION

Election/Restrictions

1. Claims 25-36 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on 10/14/2005.

Specification

2. The disclosure is objected to because of the following informalities:

On page 9, line 29, the phrase “be used on with agricultural equipment” should be corrected.

Appropriate correction is required.

Drawings

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: “30” and “201.” Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and

informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-24 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Pat. No. 4,807,131 to Clegg.

Regarding claim 1, Clegg discloses a device including:

- a first actuator (34b) and a second actuator (34a) on opposite sides of a blade
- a controller (Fig. 2) for permitting either manual or automatic operation of the actuators such that said actuators are responsive to the controller in a linked mode

The controller has:

- a user-operable input mechanism (52)
- an information processor (120)
- an output (130a)

Regarding claim 2, the output displays one blade position value (Col. 15, lines 53-59 and Col. 13, lines 1-6).

Regarding claim 3, the device has a laser guidance apparatus including a signal source (10) and a plurality of detectors (12 and Col. 10, lines 66-68).

Regarding claims 4, 16 and 18, Clegg further discloses the controller having:

- a data interface (Fig. 2)
- user operable input mechanism (52, 116)
- an information processor (120)
- an output (130a)

Regarding claims 5-6 and 19, the signal source is a laser source (10).

Regarding claims 7-9 and 20-21, in the linked mode (i.e. second mode considered to be when the elevation of the blade is controlled) the blade is moved up and down (Col. 15, lines 53-59).

Regarding claim 10, the information processor is a CPU (120).

Regarding claims 11 and 12, the output (130a) can either display only or a plurality of elevation numbers corresponding to the tool.

Regarding claim 13 and 22, the guidance apparatus includes masts (14).

Regarding claims 14-15, the actuators move in response to a deviation (Col. 15, lines 53-59).

Regarding claim 17, the user can define a predetermined slop (Col. 16, lines 4-11).

Regarding claim 23-24, the masts are mounted on the blade (Col. 10, lines 66-68).
